Table S1

Figure S1-S5

**Introduction**

Supporting Table S1 provides statistical information and additional data details for New England river winter discharges since 1928. Supporting Figures S1-S5 provide details underlying the tracer selection process for end-member mixing analysis (EMMA) and event-level EMMA errors.

Table S1. Winter discharge increases in New England rivers, 1928-2025.

River and gauge location	USGS monitoring station #	Cumulative winter discharge increase from 1928 to 2025	p value	Approximate Adjusted r <sup>2</sup> te %
--------------------------	---------------------------	--	---------	--
